

Kandji for Business

Device Management for Your Apple Fleet

Why Kandji for Business

- Kandji is the Apple device management and security platform that empowers secure and productive global work. With Kandji, Apple devices transform themselves into enterprise-ready endpoints, with all the right apps, settings, and security systems in place. Through advanced automation and thoughtful experiences, we're bringing much-needed harmony to the way IT, InfoSec, and Apple device users work today and tomorrow.

Main Benefits

Time savings for IT admins

Kandji automates most admin tasks, saving time and IT resources. It also lowers the cost of compliance. Based on customer feedback, adopting Kandji can result in 25% to 50% time savings for IT admins, resulting in tens of thousands of dollars of savings per year

- Check out the Syndio [case study](#)
- Calculate specific savings with Kandji using the online [Apple MDM cost calculator](#)

Reduced IT support tickets

Kandji provides the best employee experience, slashing support requests and increasing employee satisfaction. According to [industry data](#), the average cost of an IT support ticket is around \$15. Based on [customer feedback](#), adopting Kandji can result in 75% less tickets resulting in thousands of dollars of savings per year.

No training required

Kandji is powerful but easy to learn and easy to use. Kandji's built-in automations make it easy for anyone to manage an Apple fleet. In contrast, other MDM solutions require significant investments in certification and training, which can cost organizations thousands of dollars per year.

Minimize downtime

Keep the workforce productive. Kandji provides world-class support 24/5 to customers across the globe. Kandji's Support team is populated entirely by Apple admins, which provided more than 50,000 customer interactions in 2023, with 96% customer satisfaction and 86% response times below one minute. Other MDM vendors charge separate contracts for such "premium" support, which can cost organizations thousands of dollars a year.

Stronger Apple fleet security

Apple devices are increasingly targeted by bad actors, inflicting reputational and actual damages. Kandji provides robust security settings and automatically remediates devices that fall out of compliance with them. Admins can map device settings to CIS benchmarks with a single click, using Kandji's pre-built templates. Admins can plug vulnerabilities in outdated apps by automating software updates. Kandji makes it easy to patch apps and operating systems, keeping fleets safer.

Product innovation

Kandji modernizes your infrastructure. It's an innovative, cloud-native solution with powerful integrations that is purpose-built for Apple devices. Kandji provides a fully hosted app catalog. Kandji will keep innovating for you, incorporating the latest trends and developments of the Apple ecosystem.
